### PRODUCT WARRANTY

At Christensen Arms,  
excellence is in our blood,  
and perfection is what we  
strive for.

Over 20 years after we developed the first carbon fiber barrel, we're still innovating and building some of the lightest and most accurate firearms ever produced. From precision bolt guns to custom 1911 handguns to our top-of-the-line AR-10 and AR-15 platforms, Christensen Arms builds some of the highest quality firearms available. Whether you're new to the brand or a seasoned veteran, stick around and see why Christensen Arms firearms are preferred by firearm competitors, passionate hunters and firearm enthusiasts from around the globe.

# BARREL TECHNOLOGY

## BORN OUT OF THE AEROSPACE INDUSTRY

Founded in Utah in 1995, with roots in the aerospace industry, Christensen Arms developed the first carbon fiber rifle barrel. This patented technology resulted in one of the most innovative advances in firearms within the last two and a half decades.

With over 20 years of firearm experience focused on using top-tier aerospace materials and processes, Christensen Arms manufactures some of the most lightweight, precise, and accurate firearms in the industry and around the world.

---

## AEROGRADE CARBON FIBER AND STAINLESS STEEL BARRELS

When we first developed the carbon fiber barrel, we knew it was going to become one of the most innovative advances in firearms in recent decades. Offering superior strength and rigidity over traditional heavy-profile barrels and the extreme light weight of light-profile barrels, our carbon fiber barrels are engineered and manufactured in house from aérograde materials to ensure they meet the same high standards and quality control you would expect from any product carrying the Christensen Arms name. Our in-house button-rifling process utilizes aérograde processes and specifications in every rifle barrel we produce. Our barrels are reamed and inspected to a tolerance of +/- .0001. Our technology and aerospace pedigree guarantees precise measurements and verifications of twist rates that ensure a repeatable and highly accurate rifle.

### CARBON FIBER

Designed using precision engineering adopted from the aerospace industry, our carbon fiber barrels are crafted using a proprietary layered design that fully utilizes the strength and thermal conduction benefits of carbon fiber to achieve more consistent barrel harmonics and accuracy. The barrel lining is machined from 416R stainless steel, button rifled, with a bore tolerance of +/- .0001.

### STAINLESS STEEL

Built using 416R stainless steel, our stainless barrels are precision machined to the industry's highest standards, stress relieved, and hand lapped to guarantee sub-moa accuracy.

### MATCH CHAMBER

Every Christensen Arms chamber is CNC machined using minimum-diameter match-grade reamers and optimized for accuracy and performance.

# CARBON FIBER STOCK AND HANDGUARD TECHNOLOGY

## AEROGRADE CARBON FIBER STOCKS

Our AeroGrade Carbon Fiber Stocks are engineered using advanced aerospace materials and processes to take full advantage of the superior strength of carbon fiber to produce the lightest, most rigid stocks available. Our stocks are hand built in-house by a trained, composite technician to ensure an exceptionally high-quality stock with the ultimate strength-to-weight ratio. They are available in a number of styles and finishes to suit your needs.

## HAND LAID CARBON FIBER COMPOSITE STOCKS

Our Carbon Fiber Composite Stocks are engineered to offer the user a strong, yet lightweight composite stock at an affordable price. Like our AeroGrade stocks, these are hand laid and available in a number of styles and finishes. Our carbon fiber composite stocks use Invar pillars to reinforce the bedding foundation.

## AEROGRADE MODERN SPORTING RIFLE HANDGUARDS

Our free-float, carbon fiber MSR Handguards are specifically designed to shed valuable weight and provide superior strength over stocks made from traditional materials. Our handguards are available in a variety of lengths and finish options.

# BOLT RIFLES

Coming from a long lineage of outdoorsmen and hunters, we set out to improve the hunting experience by creating highly accurate and exceptionally lightweight rifles. Utilizing top-tier aerospace materials and processes, it's easy to see why Christensen Arms firearms are preferred by enthusiasts and passionate hunters around the globe.

---

## CHRISTENSEN ARMS ACTION

All stainless Christensen Arms actions are machined from a solid billet of heat-treated 416T stainless steel and utilize precision surface ground recoil lugs. Each half-MOA rifle is blueprinted with lapped lugs and trued receiver faces. Our actions are available with integrated 20 MOA, split picatinny rail, or standard Remington® 700 optic base standard.

Christensen Arms' precision bolts are machined in house and are spiral fluted and Black Nitride™ coated for smooth operation and superior wear performance. All bolts utilize an M16-style extractor for proven extraction performance. All magnum bolts use dual ejectors.

---

## INVAR PILLARS AND SPOT BEDDING

Christensen Arms' bolt action rifles with carbon fiber composite stocks feature dual bedding pillars constructed from Invar, a nickel/iron alloy known for its uniquely low coefficient of thermal expansion. Unlike aluminum, Invar pillars do not expand or contract with temperature changes so you will not experience variances in bedding or accuracy. In addition, we spot bed the recoil lug area to ensure stability and optimal performance.

## NEW FOR 2017

# MESA

Using many of the same features and designs perfected in the Christensen Arms Ridgeline, the Mesa was created as a premium, yet accessible lightweight rifle with a featherlight-contour, stainless steel barrel and a carbon fiber composite stock. Weighing in at only 6.5 pounds (short action) and carrying the Christensen Arms Sub-MOA Guarantee, the Mesa is the perfect rifle to carry deep into the backcountry.

# MODERN SPORTING RIFLES

Our unique, free-floating, carbon fiber handguards with a patented carbon fiber picatinny rail are available with incorporated KeyMod™ or M-Lok® attachment methods and are mated perfectly to our matched receiver sets. Each MSR is machined from 7075 billet aluminum and assembled using premium components by a qualified gunsmith. They are range tested and carry the Christensen Arms Sub-MOA Guarantee.

---

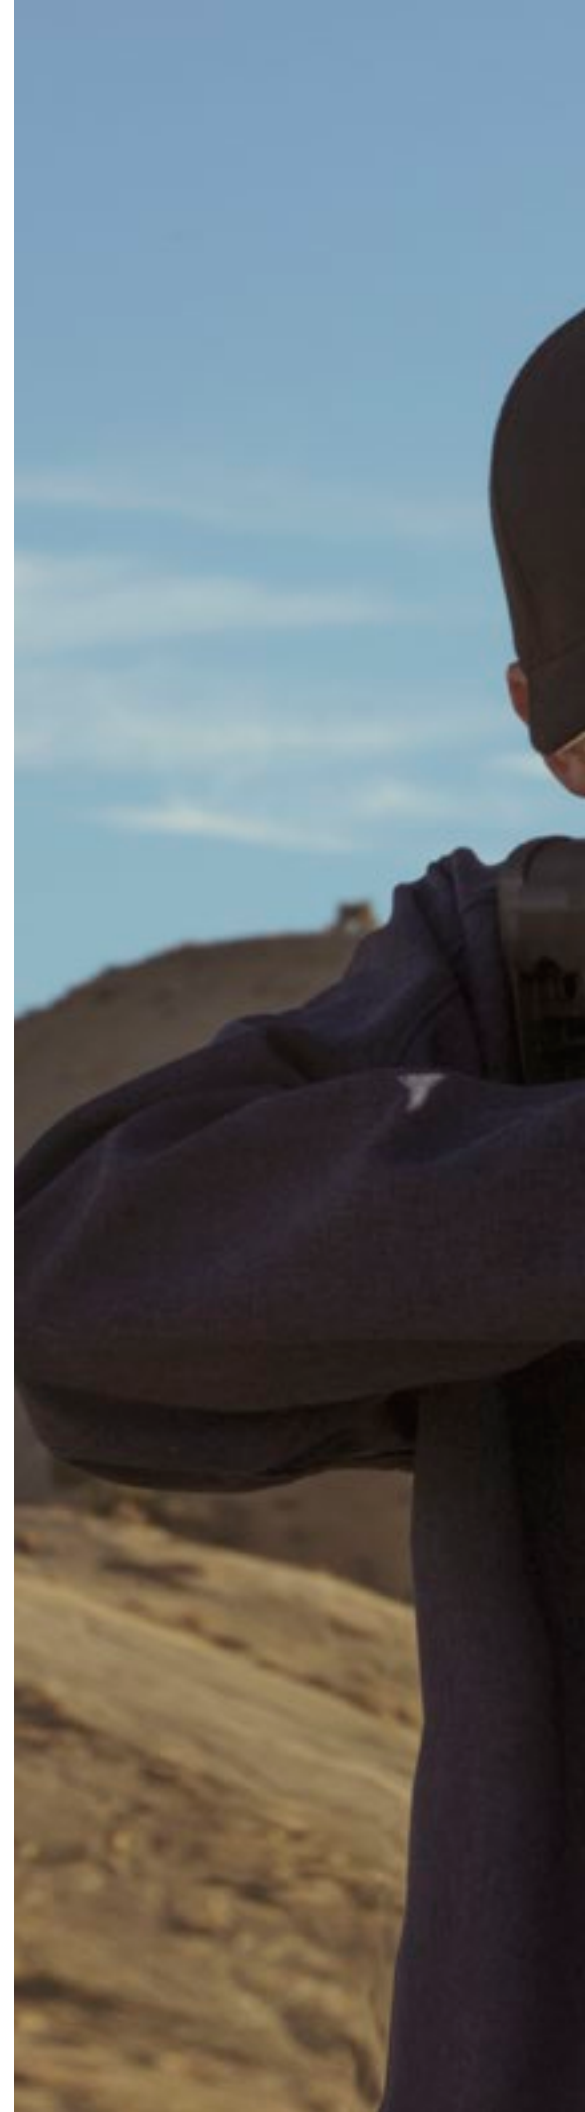

## RECEIVER SET DESIGN

Our MSR receivers feature a slim, ergonomic profile and a unique exterior design that is engineered to mate perfectly with our carbon fiber handguards. Use of 7075 billet aluminum allows a lightweight, rugged platform capable of performing under any circumstances.

---

## ACCURACY GUARANTEE

Each Christensen Arms MSR is proudly hand built and assembled in the USA to ensure quality and precision throughout the entire manufacturing process. MSR platform rifles undergo rigorous testing to affirm they will meet our Sub-MOA Accuracy Guarantee.

# CA-15 G2

## AVAILABLE WITH CARBON FIBER OR STAINLESS STEEL BARREL

The Christensen Arms CA-15 platform is a custom-built AR-style rifle optimized for weight and accuracy. The CA-15 G2 features a newly designed matched receiver set with a contour-matching carbon fiber handguard, Black Nitride-coated BCG, and a single stage match-grade trigger assembly. Available with both steel and carbon fiber barrels, the CA-15 G2 uses the industry's most advanced composites and carries Christensen Arms' Sub-MOA Accuracy Guarantee.

# CA-10 DMR

If you are seeking the ultimate in MSR performance, power, lightweight, and long-range potential, the CA-10 DMR is your ticket. Originally designed for the 7.62x51/308 Win, Christensen Arms has expanded the caliber offerings for 2017 to include 6.5 Creedmoor, .243 Win, and .260 Rem. The feature-rich CA-10 DMR is not only the flagship of Christensen Arms' MSR product line, it's the benchmark for all 7.62x51/308 Win-based AR weapon platforms.

# 1911s

Using only premium materials such as titanium, stainless steel, and carbon fiber, Christensen Arms strives to craft the finest 1911 handguns ever produced. After being machined, each slide is hand fit to its frame to guarantee a perfectly smooth and highly accurate handgun. We use a tunable match-grade trigger that is factory set to 3.5-4.5 lbs. Each handgun is function tested and guaranteed to shoot a 5-shot, 2 inch group at 25 yards before it leaves the Christensen Arms facility.

NEW FOR 2017

# A-SERIES 1911

9MM/45 ACP

## ALUMINUM FRAME

Christensen Arms strives to craft the finest 1911 handguns ever produced, and the new A4 and A5 aluminum-framed 1911s are no exception. Currently available in 9MM, each frame is machined from 7075 billet aluminum and assembled using only premium components, including a tunable match-grade trigger. After being machined, each newly-designed slide is hand fit to its frame to guarantee a perfectly smooth and highly accurate handgun - a 5-shot, 2 inch group at 25 yards. Weighing in at roughly 2 lbs, the new A4 is the lightest 1911 we produce.

# CLASSIC SERIES 1911

9MM OR 45 ACP

TITANIUM OR STAINLESS  
STEEL FRAME

Christensen Arms Classic 1911 handguns are designed and manufactured to be the premium standard in hand-crafted 1911s. Available with either a titanium or billet stainless steel frame, each 1911 handgun is hand built using premium components including a highly accurate match-grade barrel. Our slides are fully machined from 17-4 stainless steel or Damascus steel with the Christensen Arms “ram head” serrations and hand fit to ensure an ultra smooth and accurate operation.
